카드 요약 / 당시 확인 내용

BASF Agricultural Solutions completed its acquisition of biological insect-control company AgBiTech on March 31, 2026, following the January 2026 agreement and regulatory clearance. AgBiTech, which operates in Brazil, the U.S. and Australia, uses nucleopolyhedrovirus (NPV) technology to control lepidopteran caterpillar pests in soybean, corn, cotton and specialty crops, a major pest problem for Brazilian growers. The deal gives BASF full ownership of the bioinsecticide technology and manufacturing assets, with plans to scale the biologicals globally from its Brazil base.
