카드 요약 / 당시 확인 내용

After 12 years of research and over 3,200 trials, Syngenta is launching Vertento insecticide for the 2026 U.S. season. The product contains the active ingredient isocycloseram, part of a new mode of action classified in IRAC Group 30 and marketed under Plinazolin technology. Vertento delivers foliar insect protection in cotton, onion and peanut crops, acting by contact and ingestion to provide rapid feeding cessation in difficult-to-control pests such as plant bugs, stink bugs, thrips and mites. Because it shares the Group 30 active ingredient, it is positioned as a resistance-management tool when rotated with older chemistries.
