카드 요약 / 당시 확인 내용

Farm Progress reported on May 27 that resistant corn earworm and soybean gall midge are emerging threats in the Upper Midwest. Entomologists said 87% of sampled Wisconsin fields carried the Old World bollworm resistance gene, undermining pyrethroid performance, while soybean gall midge has already reached neighboring Minnesota. The article's practical message is that growers need earlier scouting and diversified insect - control programs instead of repeating last year's chemistry.
