카드 요약 / 당시 확인 내용

HortiDaily reported on May 28 that Spain's Modoru Biotech is building an RNA crop - protection platform around dsRNA molecules, nanoencapsulation, and industrial - scale purification. The company said 99% of RNA molecules can degrade in under seven days, while it is targeting production and purification costs below five euros per gram and application rates below one gram per hectare. That combination is critical because RNA crop protection has often been blocked more by cost and field persistence than by lab efficacy.
