Syngenta said VIRESTINA technology is the first selective herbicide to control resistant grass weeds in soybean and cotton in nearly 40 years. The company said herbicide resistance is officially reported in 75 countries and affects more than 100 crops, with grass weeds accounting for 40% of the 273 resistant weed species documented worldwide. Argentina approved the technology first, and Syngenta plans to expand into Brazil, Australia, the U.S., and Canada.
