카드 요약 / 당시 확인 내용

Seed World wrote on May 11 that the seed - treatment market is moving toward more sophisticated protection packages, especially for nematodes and soilborne disease. The article highlighted Syngenta's TYMIRIUM technology as an example of how the industry is targeting a problem area that is much larger and more technologically advanced than it was in the past. The commercial implication is that seed treatment is becoming a premium crop - protection layer rather than a commodity add - on.
