카드 요약 / 당시 확인 내용

BioWorks said on May 1 that its new BioNex insecticide achieved 98% control of cotton aphids on hibiscus one day after treatment in a greenhouse trial, compared with 78% for a competing product. The company said BioNex works by disrupting the insect nervous system while its oil component improves coverage, residual activity and contact efficacy. That is commercially important because fast knockdown is one of the biggest barriers to broader adoption of biological insecticides.
