카드 요약 / 당시 확인 내용

Agriculture.com reported on March 6 that FMC's rimisoxafen has been classified by the Herbicide Resistance Action Committee as the first dual - mode - of - action herbicide active ingredient in a single molecule. It is designed as a preemergence product for corn and soybeans and targets resistant amaranth species such as waterhemp and Palmer amaranth, along with velvetleaf, lambsquarters, kochia and prickly sida. The article makes clear that stewardship and premix strategy will be critical to preserve its value.
