## 카드 요약 / 당시 확인 내용

Corteva said on May 15 that Verpixo fungicide with Adavelt active is now available for the 2026 U.S. sugarbeet season. The company said extensive field and lab testing confirmed efficacy against Cercospora leaf spot and emphasized that CLS can cause up to 30% annual yield loss when not controlled. Bringing a new FRAC Group 21 mode of action into sugarbeet programs improves resistance - management flexibility while protecting both yield and sugar quality potential.
