카드 요약 / 당시 확인 내용

CropLife published Corteva Agriscience guidance on June 2 explaining that effective pest management starts at emergence and that each crop stage brings different insect and disease threats. The guide highlights corn rootworm larvae, black cutworm, European corn borer, gray leaf spot, soybean cyst nematode, soybean aphids, white mold, sudden death syndrome, and red crown rot. The commercial message is that scouting and treatment timing need to be planned as a season-long program rather than a rescue response.
