카드 요약 / 당시 확인 내용

Farm Progress published an A - to - Z crop scouting guide on May 29 focused on helping growers identify insects, diseases, and weeds in corn and soybeans. University of Illinois entomologist Nick Seiter said rootworm is consistently the corn insect causing the biggest combined losses and control costs, and warned that larvae are likely to continue overcoming trait packages in 2026. The article also stresses that in a narrow - margin year, complete and frequent scouting determines which inputs are worth the spend.
