카드 요약 / 당시 확인 내용

All manufacturers of pesticide products containing the active ingredient paraquat - dichloride have voluntarily cancelled their product registrations, beginning the phase - out of the use of paraquat in California. Companies began voluntarily cancelling registration in April in lieu of providing required data, with the last registrant voluntarily cancelling its registration on August 6, 2026. DPR invoked its reevaluation authority in November 2024 and required registrants to submit scientific data by June 5, 2026 to address newly identified gaps in DPR's human health toxicology database. DPR's preliminary reports identified a potential association between paraquat exposure and thyroid impacts and birth defects, as well as adverse effects on wildlife, particularly birds. Under California law, licensed dealers may continue to possess and sell existing products for up to two years following each product's cancellation effective date.
