BASF Agricultural Solutions is investing a low double-digit million-euro amount in a new Climate Center at its headquarters in Limburgerhof, Germany. The purpose-built facility will strengthen the company's research and regulatory capabilities and support generation of the scientific data required for registration of crop protection products worldwide. Once operational, it will house state-of-the-art climate chambers providing precisely controlled environmental conditions for GLP-compliant ecotoxicology studies and for insecticide research including insect population development for early-stage screening programs. Construction has already started and completion is scheduled for the first half of 2027. "This will enable us to bring innovative solutions to farmers more efficiently, responsibly and in line with evolving regulatory requirements," said Melanie Bausen-Wiens, Management Board Member.
