카드 요약 / 당시 확인 내용

Nebraska Extension entomologists report weekly pheromone trap counts tracking western bean cutworm moth flight across the Nebraska Panhandle and southwestern Nebraska for the 2026 season. High moth flights have continued in southwestern Nebraska while numbers have begun to decline in parts of the Panhandle. Extension entomologist Pin - Chu Lai warned that western bean cutworm can cause severe damage to both corn and dry beans if populations exceed treatment thresholds. Growers are urged to scout fields for egg masses and newly hatched larvae, timing any insecticide application to peak egg hatch rather than to moth flight alone.
