카드 요약 / 당시 확인 내용

University of Minnesota Extension announced the final Field Notes webinar of the 2026 season, featuring IPM Educator Anthony Hanson and Plant Pathologist Dean Malvick. The session will discuss what data exists on non-conventional pest management tactics such as hydrogen peroxide and sugar applications, alongside late-season corn disease updates. Tar spot and southern rust have been confirmed in southern Minnesota, and the discussion will address whether late-season fungicide applications remain justified based on disease onset, growth stage and expected return on investment.
