카드 요약 / 당시 확인 내용

Scientists and health advocates warned that a Senate proposal to overhaul the Toxic Substances Control Act (TSCA) could weaken protections for children and other vulnerable populations. Critics argue the changes would alter how new and existing chemicals are evaluated for risk and could reduce regulatory requirements on manufacturers. Supporters say the overhaul would bring predictability and speed to chemical reviews. The debate comes amid broader shifts in U.S. chemical and pesticide policy; pesticides are regulated primarily under FIFRA, but TSCA governs industrial chemicals including intermediates and many substances used across manufacturing supply chains.
