카드 요약 / 당시 확인 내용

CropLife reported on July 16, 2026 that InnerPlant announced CropVoice Whole Farm for the 2027 season, expanding a disease detection network that alerts corn and soybean growers to fungal disease before symptoms are visible. CropVoice Whole Farm adds InnerCorn sensors to the InnerSoy sensor system and provides weekly scouting reports, real-time alerts when active infection is detected near fields, and a 24/7 agronomy dashboard. InnerPlant said crop signals are combined with environmental monitoring, tissue sampling, images and agronomist notes to build disease forecast maps.
