카드 요약 / 당시 확인 내용

Global Agriculture reported on July 15, 2026 that BASF launched Aphthena, a biological beneficial insect attractant in the United Kingdom designed to support Integrated Pest Management by enhancing natural aphid control. The product uses (E) - beta - farnesene, a naturally occurring aphid alarm pheromone, to attract predators and parasitoids including ladybirds and lacewings. BASF positioned Aphthena as part of its biological crop protection portfolio and said it complements existing IPM strategies rather than replacing other crop protection measures.
