카드 요약 / 당시 확인 내용

Michigan Farm News reported that tar spot was confirmed in Michigan for the first time in 2026. The report, published during mid - July, flags renewed scouting needs for corn growers as tar spot is a major foliar disease that can drive fungicide decision - making when field history, weather and crop growth stage create risk. For crop protection suppliers, first confirmations in a state are practical demand signals for fungicide timing and retailer advisory materials.
