카드 요약 / 당시 확인 내용

UMass Amherst published an IPM message for cranberry growers on July 17, 2026. The update discussed crop - protection decisions including pest and weed stages, noted that dodder stages in the field were diverse, and emphasized following the pesticide label and use guidance when glyphosate and adjuvants are involved. For specialty crops such as cranberry, the update illustrates how narrow timing, label compliance and local scouting drive herbicide and insect - management decisions.
