New product introductions tracked by 'Global Agriculture' point to a changing R&D agenda, with biological technologies, resistance management and supply-chain resilience emerging as key priorities. The analysis tracked 48 product launches during January – May 2026. Biological products expanded significantly beyond niche applications, featuring microbial strains, plant-derived compounds, seaweed extracts, and peptide-based technologies, though conventional chemistry continues dominating global acreage. Rice accounted for one of the highest concentrations of launches (blast, sheath blight, brown spot, stem borers, brown plant hopper). Herbicide launches centered on pyroxasulfone, glufosinate-ammonium, dicamba and isoxaflutole; fungicides emphasized mefentrifluconazole and tricyclazole. Leading companies: ADAMA, BASF, Bayer, Corteva, FMC, Syngenta, UPL and Atul.
