Aphea.Bio and Bayer announced a strategic research partnership on 10 June 2026 to co - develop bioinsecticides for sap - sucking insects, combining Aphea.Bio's bioactive metabolites — obtained from rigorously selected microbial strains — with Bayer's global development, regulatory and commercialization expertise. Initial efforts concentrate on fruit crops like pome, stone fruit, citrus and grapes, with possibilities to broaden into vegetables and key row crops such as cotton and soybean. By focusing on non - living microbial derivatives, the prototypes bypass the shelf - life and handling constraints of live biologicals, delivering stable IPM alternatives as field validations begin amid growing resistance and tightening regulation of conventional insecticides.
