카드 요약 / 당시 확인 내용

NFU Sugar and British Sugar, with BBRO support, secured emergency authorization for a second application of the insecticide Insyst SG to control peach - potato aphids in sugar beet, valid May 28 through August 1. Growers must first complete a three - spray program and can only apply once aphid thresholds are met, while keeping detailed records. In 2020 virus yellows infected 38% of the national crop, cutting yields 25% with some farms losing up to 80%. 2026 aphid pressure is forecast to be the highest since 2020, following the EU neonicotinoid seed - treatment ban.
