카드 요약 / 당시 확인 내용

Syngenta's Victrato seed treatment, built on Tymirium technology with the active ingredient cyclobutrifluram, moves to full commercial launch in 2026, protecting against a broad spectrum of nematodes plus foliar and soil-borne diseases including sudden death syndrome (SDS). EPA registered cyclobutrifluram in November 2025 as a Group 7 fungicide / N-3 nematicide for uses including soybean and cotton seed treatment, expanding options against soybean cyst nematode (SCN) and SDS for the 2026 season.
