카드 요약 / 당시 확인 내용

farmdoc reported on July 24, 2026 that southern rust of corn, caused by Puccinia polysora, was confirmed in Illinois for the 2026 season after a July 23 report from Williamson County. The article advises scouting, especially in fields with susceptible hybrids that have not reached later reproductive stages. Fungicides with multiple modes of action applied between VT and R3 can reduce disease severity and protect yield, while Crop Protection Network tools can track disease spread.
