AgroPages reported on July 23, 2026 that Koppert Brasil introduced Macan, a microbiological fungicide based on *Bacillus velezensis* CECT8237, at Insectshow 2026. The product expands biological disease management options for Brazil sugarcane and is described as the result of more than 15 years of research into a proprietary bacterial strain. It is designed to provide rapid and robust protection against foliar diseases and integrate into existing crop protection programs.
