AgroPages reported on July 23, 2026 that an eight - year survey in the Journal of Plant Protection found Fusarium crown rot occurs annually across more than 6.67 million hectares in China. Yield losses in severely affected fields ranged from 10.69 to 51.57 percent. From 6,140 isolates collected between 2018 and 2025, Fusarium pseudograminearum accounted for 71.21 percent nationally and 85.61 to 95.85 percent in five northern wheat provinces. Integrated management includes moderately resistant cultivars, seed treatment or coating, later sowing and targeted fungicide spray.
