카드 요약 / 당시 확인 내용

AMIS reported in July 2026 that the Hormuz crisis resulted primarily in a fertilizer price shock rather than a broad physical supply shock. Most respondents had secured current - season requirements through advance purchases, inventories or domestic production, but shipping disruptions and transport costs complicated fertilizer movements. Reported nitrogen fertilizer price increases generally ranged from 25 to 50 percent, phosphate increases from 5 to 15 percent, while potash prices remained comparatively stable. Some wholesale nitrogen prices began to ease after peak planting demand.
