카드 요약 / 당시 확인 내용

India is moving toward prohibiting carbosulfan, a carbamate insecticide used to control pests in rice, cotton, and vegetable crops. The government published the Draft Banning of Carbosulfan Order, 2026, proposing a complete prohibition on the manufacture, import, transport, distribution, sale, and use of the insecticide, with a 30 - day public consultation period. Carbosulfan rapidly metabolizes into carbofuran, a significantly more hazardous compound, and both inhibit acetylcholinesterase, an enzyme critical for nerve signaling, posing risks to humans and vertebrates. The WHO classifies carbosulfan as moderately hazardous, several countries have already restricted it, and the insecticide was added to a United Nations chemicals treaty in 2025. India's carbosulfan market is estimated at approximately Rs 400 crore. If finalized, all existing registration certificates would be cancelled with a three - month return deadline, affecting manufacturers, distributors, retailers, and farmers, and driving demand for safer alternatives and integrated pest management.
