카드 요약 / 당시 확인 내용

A study by Sandy Dall'erba and Aaron Hager of the University of Illinois and Corey Lacey of the Illinois Soybean Association, published August 18, 2026 in Weed Technology (Cambridge University Press), estimates that a glyphosate ban would cost Illinois corn and soybean producers \$300 - 609 million annually in lost revenue, a 1.8 - 3.6% revenue loss. Researchers calculated current glyphosate use and expenditures across Illinois, combined published estimates of corn and soybean yield losses associated with reduced glyphosate use, and evaluated alternative herbicides accounting for higher costs, lower effectiveness and likely price increases from higher demand. The authors state adaptation will require slightly higher input costs, more complex management, and careful planning. The research is described as the first transparent, peer - reviewed assessment of the economic consequences of glyphosate elimination for the state.
