카드 요약 / 당시 확인 내용

Two-thirds of Americans favor banning the use of glyphosate, the active ingredient in Roundup, on crops grown in the United States, according to a nationally representative survey by the Annenberg Public Policy Center of the University of Pennsylvania. The survey was conducted April 14 - 28, 2026 among 1,639 U.S. adults in the Annenberg Science and Public Health (ASAPH) panel by SSRS. Support cuts across political and ideological groups: 72% of MAHA (Make America Healthy Again) movement supporters favor banning glyphosate, as do 70% of non-supporters. Most Americans have read, seen, or heard little about glyphosate and many are uncertain about its health effects; only 33% say it is most accurate that glyphosate increases the U.S. food supply by helping farmers control weeds, with 48% unsure.
