카드 요약 / 당시 확인 내용

Morocco's OCP is targeting approximately 4.5 million metric tons per year of new phosphate capacity by end of 2026, rising to 9 million metric tons of new capacity by 2028 under the SP2M plan, with total fertilizer production reaching 20 million metric tons annually by 2027. Investment amounts to \$5.25 billion in 2026 and \$14 billion total from 2025 - 2027. The expansion centers on the Jorf Lasfar and Safi chemical hubs plus a new Mzinda Phosphate Hub, with three 1 - million - ton TSP granulation units recently added at Jorf Lasfar. China's phosphate export restrictions have eliminated roughly 30% of global supply, positioning OCP to capture demand from India, Brazil and the U.S., where duties on Moroccan phosphate imports have been temporarily suspended.
