카드 요약 / 당시 확인 내용

According to Mosaic's Brazil country manager Eduardo Monteiro, Brazil is experiencing a 20 - 25% year - over - year decline in phosphate fertilizer application in 2026. Brazil's dependence on imported fertilizers is expected to exceed 90% in 2026, up from 85% in 2025, as Mosaic idles commodity fertilizer production in Brazil due to high sulfur costs and limited availability. Some 6.075 million tonnes of fertilizers were scheduled for import in August alone, with the Port of Santos accounting for 2.587 million tonnes and Rio Grande 873.5 thousand tonnes; trade disruptions affecting urea, ammonia, sulfur and phosphate prompted port authorities to recommend preferential berthing for fertilizer vessels. Monteiro warned reduced technology use could lower average agricultural productivity by 6 - 7%, and a Santa Catarina cooperative cut its 2026 fertilizer production forecast by 12%. Brazil allocated approximately US\$777 million in financing for the fertilizer sector under the Brasil Soberano 3 plan.
