카드 요약 / 당시 확인 내용

Groundwork BioAg, the company behind the Rootella[®] mycorrhizal inoculant platform, has announced the issuance of its first verified carbon credits under the Rootella Carbon[®] Carbon Dioxide Removal (CDR) program. The issuance comprises 19,568 net Verified Carbon Units (VCUs), independently verified by SCS Global under the Verra Verified Carbon Standard (VCS), with multiple purchase agreements already secured. It represents the first carbon credits generated under Verra's VM0042 methodology in the United States. The program expanded from approximately 9,000 acres in 2023 to over 700,000 acres across the U.S. Midwest and Canadian Prairies; the mycorrhizal approach sequesters between 1.5 and 3.5 tonnes CO2 equivalent annually per acre.
