카드 요약 / 당시 확인 내용

A new report released by PAN Europe with Coffee Watch, Inkota - network and Deutsche Umwelthilfe exposes the widespread use of Highly Hazardous Pesticides (HHPs) across coffee-producing countries. 60% of pesticides used in coffee are classified as HHPs and 59% are banned within the EU; 22 are carcinogenic and 40 disrupt reproduction or hormones; 19% of green coffee samples contained residues. Brazil used 19.8 million liters on coffee in 2015; Kenya's coffee accounts for 27% of national pesticide consumption on under 1% of land; in Colombia 81.3% of surface water samples contained residues; in the Dominican Republic 87% of farmers reported no protective equipment. The report urges a transition to agroecological methods with government and corporate support.
