카드 요약 / 당시 확인 내용

The Australian Pesticides and Veterinary Medicines Authority (APVMA) has published its final decisions on the chemical reviews of non - selective herbicides paraquat and diquat. Both remain available with significant new restrictions. The maximum application rate falls from 1,150 grams per hectare to 231 grams per hectare; backpack sprayers will be phased out; enclosed mixing and loading systems and enhanced PPE are required. New registration conditions apply to labels of all products manufactured from 23 June 2026, and existing stock will be phased out over two years. The APVMA found the weight of evidence does not show paraquat exposure through approved uses increases the risk of developing Parkinson's disease.
