카드 요약 / 당시 확인 내용

The U.S. Environmental Protection Agency approved registrations for three new active ingredients that can help manage weeds and diseases in a variety of crops. The newly approved herbicide ingredients include diflufenican, an herbicide for corn and soybeans, and epyrifenacil, an herbicide for corn, soybeans, wheat, canola and fallow ground. The approvals are expected to expand pest management options beginning with the 2027 growing season. Farm groups have long advocated for new products as weeds and diseases continue to develop resistance to existing crop protection tools.
