On 3 July 2026 in New Delhi, PI Industries introduced Pioxaniliprole, an insecticide discovered and developed in India, marking a shift that positions the country not only as a manufacturing base but as an originator of crop protection innovation. The molecule was developed over more than a decade of investment in molecular discovery, advanced chemistry, biological sciences and formulation technologies. Vice Chairperson Mayank Singhal said the molecule has been designed to provide effective control of key insect pests with longer-lasting efficacy while emphasising plant safety and environmental responsibility. Historically, patented agrochemical innovations in India originated from global multinational research programmes, while Indian companies built strength in manufacturing and process chemistry; Pioxaniliprole reverses that pattern under the 'Innovate in India for the World' theme.
