카드 요약 / 당시 확인 내용

This analysis reports that between 2009 and 2023, 105 active ingredients lost patent protection globally, and that the next critical cycle from 2026 to 2028 will affect molecules within an approximately \$85 billion annual market. Development costs have roughly doubled: bringing a new active ingredient to market cost \$152 million in 1995 versus \$301 million over 2014 - 2019, with average lead times now around 12.3 years. Prothioconazole alone generated \$1.3 billion in global sales in 2023, exemplifying blockbuster fungicides losing exclusivity and reshaping industry economics. Structural signals cited include FMC's Q4 2025 net loss of \$1.72 billion, Syngenta's Hong Kong IPO targeting \$10 billion, and Corteva's planned Q4 2026 business separation.
