The Australian Pesticides and Veterinary Medicines Authority determined that both paraquat and diquat will remain available but with substantial restrictions. The maximum application rate has been reduced from 1,150 grams per hectare to 231 grams per hectare overall, though higher rates apply to precision spot - spraying technologies. New requirements include phasing out backpack sprayers and mandating enclosed mixing systems, along with mandatory enclosed and filtered tractor cabs for broadacre boom spray use. APVMA chief executive Scott Hansen stated that scientists found an unmanageable risk to birds and mammals requiring the rate reductions, while toxicologists determined the research does not show paraquat exposure increases the risk of developing Parkinson's disease. Existing chemical stocks will be phased out over two years.
