카드 요약 / 당시 확인 내용

The NDSU Crop & Pest Report dated July 9, 2026 said reduced susceptibility to deltamethrin and lambda - cyhalothrin has been detected in red sunflower seed weevil populations from southwestern North Dakota. It said the North Dakota Department of Agriculture Pesticide Division is working with EPA to determine whether North Dakota can be added to the Section 18 Emergency Exemption for Vertento insecticide. The report frames reduced susceptibility as an early indication that insecticide resistance may be developing and highlights grower concern about preserving management options.
