WinField United listed a July 8, 2026 crop - protection insight titled How to Protect Yield Potential from Tar Spot. The article focuses on tar spot as a yield - risk disease in corn and supports midseason fungicide decision - making based on scouting, field conditions and timing. The signal for crop - protection sales is that tar spot remains a major driver of fungicide demand in North American corn, especially where growers need practical disease - risk guidance tied to product timing.
