카드 요약 / 당시 확인 내용

Goldberg Segalla ' s Environmental Law Monitor analyzed on July 9 how EPA ' s approval of three new pesticides may or may not involve PFAS depending on which definition is applied. The post says EPA approved the pesticide registrations under FIFRA section 3(c)(5). It describes epyrifenacil as an agricultural pre - plant burndown herbicide for canola, field corn, soybean, wheat and fallow land, plus non - crop areas. The legal point is that PFAS definitions themselves are becoming a regulatory and litigation risk for crop - protection products.
