Briefs reported that the global fertilizer index rose 12% on Strait of Hormuz shipping disruptions. It said Middle Eastern fertilizer exports, amounting to about a quarter of the world ' s urea, rely heavily on the strait. The article reported that Iran halted ammonia production, Qatar halted output of urea, ammonia and sulfur after facilities were damaged, and India cut back urea and ammonia production because of reduced LNG availability. It also said sulfur prices doubled since January, raising input costs for phosphate fertilizers.
