카드 요약 / 당시 확인 내용

China's Institute for the Control of Agrochemicals (ICAMA) approved 749 new pesticide products in its eighth 2026 batch, released July 30. The batch includes 39 technical grade active ingredients and 495 finished formulations including combination products. The 39 technical approvals comprise 13 herbicide, 14 insecticide/acaricide and 12 fungicide registrations. Key molecules approved include saflufenacil, pyroxasulfone, cyantraniliprole and fluopyram — primarily patent - expired or near - expiration compounds. Standout formulations include metconazole plus pyraclostrobin for rice bakanae disease and tetraniliprole seed treatment for rice stem borers. A wider pool of qualified Chinese suppliers can support more competitive technical grade pricing over time, affecting downstream cost structures for formulators in North America, Latin America and Europe.
