카드 요약 / 당시 확인 내용

Brazil's Ministry of Agriculture (MAPA) released Ato No. 53 on September 1, 2026, containing 199 post-registration decisions for already-approved pesticides. Rather than approving new active ingredients, the act primarily expanded the commercial infrastructure around existing products. Of the 199 decisions, 139 (70%) were expansions adding new importers, formulators, technical material sources, brand names or approved uses — including 53 new importers, 35 new formulators and 31 new technical grade products — alongside 38 restrictions/cancellations and 22 administrative decisions. China appeared explicitly in 22 of 199 items (18 expansions), with companies such as Jiangsu Flag Chemical Industry receiving multiple formulator approvals. The act authorized imports of pesticides containing ingredients banned in Europe, including chlorpyrifos (withdrawn by the EU in 2020) and propiconazole (EU approval ended 2018). Aerial application was newly approved for potato and tomato crops for at least one product. The analysis notes these routine administrative expansions understate the true pace of pesticide market expansion in Brazil.
