카드 요약 / 당시 확인 내용

India's Ministry of Agriculture issued a Draft Prohibition Order on July 13, 2026, proposing to ban paraquat dichloride's import, manufacture, sale, transport, distribution and use under the Insecticides Act, 1968, driven primarily by public health concerns. India's paraquat market is estimated at approximately Rs 15 billion (US\$157 million). Large diversified companies such as UPL and Dhanuka Agritech face significant absolute exposure but have diversified portfolios that cushion impacts, while Crystal Crop Protection, which owns the Gramoxone trademark, faces more direct commercial impact. Major technical-grade suppliers from China and Taiwan will experience consequences depending on regulatory scope and transition timelines. Distributors and importers may hold unsold stocks creating financial liabilities if disposal timelines prove insufficient. Government data indicates 1,503 licensed units, though actual technical producers number substantially fewer — most are formulators, repackagers or marketers.
