카드 요약 / 당시 확인 내용

On 31 August 2026 the European Commission published updated progress towards pesticide reduction targets for the period 2011 - 2024. In the first seven years (2018 to 2024), there was an overall decrease of 56% in the use and risk of chemical pesticides (Harmonised Risk Indicator 1) compared to the averaged baseline period of 2015 - 2017. The use of more hazardous pesticides decreased 23% over the same period. The indicators track progress under the sustainable use of pesticides framework and the Farm to Fork strategy's 2030 reduction targets. Industry commentators warned the decline also reflects a shrinking toolbox of available active substances, with candidate - for - substitution phase - outs and slower new registrations contributing to the indicator's fall.
