카드 요약 / 당시 확인 내용

The emergency authorisation for Coragen (chlorantraniliprole), granted by the UK Health and Safety Executive following an application from NFU Sugar, British Sugar and the British Beet Research Organisation (BBRO), permits a single application between 3 June and 30 September 2026. Hotter, drier conditions are helping beet moth populations establish in the UK, with some growers reporting six - figure losses from infestations during 2025. Growers must record the dates and locations of any Coragen application and hectares treated, keep detailed records of treated areas and infestation levels, and beet tops from treated crops cannot be grazed or fed to livestock. After the authorisation expires, all growers must report via My British Sugar whether Coragen was used.
