카드 요약 / 당시 확인 내용

Bayer announced on September 3, 2026 that it is implementing its ambition to bring 10 blockbusters to market over 10 years, beginning to launch major Crop Science innovations in key agricultural regions. A blockbuster is defined as a product expected to deliver peak sales potential of at least 500 million euros. Plenexos insecticide and the Preceon Smart Corn System have already started to be commercialized. In soy, Vyconic is expected for introduction next year in the United States and Canada, and Intacta 5+ introduction is expected for the 2027/2028 growing season in Brazil. More than 15 novel crop protection modes of action are currently in the pipeline research phase, driven by the AI-powered CropKey platform, and a new broad-spectrum fungicide for soy with blockbuster potential has advanced to phase II. Bayer introduces 400 to 500 new hybrids and varieties annually.
